

M.W.W. $p \leq 1e-5$

FDR < 0.05 with Katsano Only

FDR < 0.05 with Katsano and Dolcetto

Box plot showing the number of genes identified (Y-axis, 0 to 1000) for two methods (X-axis):

- FDR < 0.05 with Katsano Only**
- FDR < 0.05 with Katsano and Dolcetto**

The plot indicates a significant difference between the two methods, with $M.W.W. p \leq 1e-5$.

Box plot showing the number of genes identified (Y-axis, 0 to 1000) for two methods (X-axis):

- FDR < 0.05 with Katsano Only**
- FDR < 0.05 with Katsano and Dolcetto**

The plot indicates a significant difference between the two methods, with $M.W.W. p \leq 1e-5$.
